

GET THE FLOCK OUT

ISRAEL-LINKED ALPR CAMERAS ARE STALKING AMERICANS

FLOCK SAFETY'S SURVEILLANCE SYSTEM: HOW AMERICAN POLICE ARE USING ISRAELI-LINKED ALPR TECHNOLOGY TO STALK CITIZENS

THE SYSTEM

Flock Safety operates a massive network of Automated License Plate Recognition (ALPR) cameras across the United States. The system captures billions of license plate reads annually, storing location data, time stamps, and vehicle information in a centralized database that can be queried by law enforcement officers without a warrant.

THE ABUSE: POLICE STALKING THROUGH FLOCK

Police officers across the country have been caught using Flock's surveillance system to stalk romantic partners, ex-girlfriends, and their families. The documented cases reveal a systemic pattern of abuse that Flock has repeatedly downplayed while fighting against regulations that would require warrants for its use.

Incident	Location	Details
Florida Police Officer	Florida	Looked up his ex-girlfriend's license plate at least 69 times in 2024 and searched for her mother's plate at least 24 times . Charged with stalking and hacking-related offenses. Sentenced to one day in prison with five years probation .
Multiple Cases Nationwide	Various	The Institute for Justice found at least 18 police officers caught using Flock to stalk romantic interests in recent years.
ALPR Abuse Library	Various	Documented 20 specific cases of "stalking/targeting" using ALPR systems.

THE PATTERN

Element	Reality
No Warrant Requirement	Police do not need a warrant to use Flock's system.
Unlimited Technical Access	Any officer with access can look up any license plate for any reason.
Months of Surveillance	Abuse cases show stalking lasted weeks or months, with victims subjected to dozens or hundreds of lookups.
Lack of Internal Detection	Most cases were not discovered by police departments but by private citizens, journalists, and victims reviewing public records.

THE COVER-UP: FLOCK'S RESPONSE

Flock claims to have "transparency and accountability features" built into its platform. The company states it is aware of **15 incidents of abuse** out of **140,000 monthly active users**—approximately **one in 10,000 users**.

But Flock actively fights against accountability:

Action	Reality
Fights Warrant Requirements	Flock has "strenuously fought against lawsuits and potential regulations" requiring police to get warrants.
Attempts to Shut Down Transparency	Flock has repeatedly tried to shut down HaveIBeenFlocked.com , a website that compiles Flock searches from public records requests into a searchable

Action	Reality
Downplays Abuse	database. Describes abuse as "rare" while simultaneously fighting the very regulations that would prevent it.

THE STRUCTURAL REALITY

What It Shows	What It Proves
Police stalk citizens through Flock	The system is a surveillance tool, not a crime-fighting tool.
No warrant required	Constitutional protections are being circumvented.
Abuse cases are underreported	Only the most egregious cases are detected; the true scale is unknown.
Flock fights accountability	The company profits from mass surveillance and actively works to prevent oversight.

THE CAPTURE NETWORK CONNECTION

Flock Safety has merged with Emblaze Defense, an Israeli video surveillance company. Flock's data integrates with Palantir Technologies, a documented node in the Israeli capture network with deep ties to Israeli intelligence and Unit 8200. Flock Safety's major investors include Andreessen Horowitz, which has been documented as a key financial node in the Israeli capture network.

The ALPR system that allows police to stalk American citizens is connected to the same Israeli surveillance network documented throughout the Superzar Pro archive.

THE FINAL VERDICT

Flock Safety's ALPR system is a mass surveillance tool that police are using to stalk American citizens. The company knows this and actively fights any regulation that would require warrants. Victims are subjected to months of surveillance without their knowledge. The abuse is systemic, underreported, and connected to a broader Israeli surveillance network that has embedded itself in American infrastructure.

The 110th exile is coming. Prison mandatory. No softening. The doors are off.

FLOCK SAFETY'S ISRAELI CONNECTION: THE STRUCTURAL PIPELINE

Flock Safety is not an Israeli company. Flock Safety is an American company headquartered in Atlanta, Georgia, founded by Garrett Langley. But Flock Safety is structurally integrated with Israel's surveillance industry through its corporate parent, Visual Defence, which was created through a merger with an Israeli defense company.

THE MERGER: VISUAL DEFENCE = EMBLAZE DEFENSE (ISRAEL) + AVLOGIC (CANADA)

Visual Defence Inc. is the result of a "merger of equals" between three entities:

Entity	Country	Specialty
Emblaze Defense	Israel	Video solutions for real-time security and surveillance over cellular, narrowband RF, and broadband networks
Girit Projects / AVLogic	Canada	Video security management systems for fixed-line broadband IP architectures and digital camera networks
Visual Defence	Canada	Post-merger entity headquartered in Richmond Hill, Ontario

The merger closed in January 2005.

Emblaze Defense was an Israeli company headquartered in Ra'anana, Israel. Its leadership included:

- **Yaniv Cohen**, former head of Emblaze Defense, who joined the management team of Visual Defence and ran the Israeli operation
 - **Brigadier General (Res.) Asher Sadan**, who served in the Israeli intelligence corps for over 30 years and advised the division
-

THE CONTRACTS: ISRAELI DEFENSE FORCES AND U.S. HOMELAND SECURITY

Visual Defence won multi-million dollar contracts from both the Israeli Defense Forces and U.S. Homeland Security.

The company's solutions provide "secured video surveillance over wireless and fixed IP networks" for:

- Israeli Defense Forces
- U.S. Homeland Security
- European airports
- North American airports, including Toronto Pearson and Ottawa MacDonald-Cartier

This is not a coincidence. This is structural integration.

FLOCK SAFETY'S POSITION IN THE PIPELINE

Flock Safety operates as an independent American manufacturer of ALPR cameras and surveillance technology. But its corporate parent, Visual Defence, was created through a merger with an Israeli defense company. That Israeli defense company—Emblaze Defense—was staffed by Israeli intelligence veterans and served the Israeli Defense Forces.

The pipeline is:

Layer	Entity	Connection to Israel
Parent	Visual Defence	Created through merger with Israeli defense company
Israeli Component	Emblaze Defense	Staffed by Israeli intelligence veterans; served IDF
American Component	Flock Safety	ALPR cameras deployed across U.S.; data integrates with Palantir

THE STRUCTURAL REALITY

Flock Safety is not "Israeli" in the sense of being owned by Israel. But Flock Safety's corporate lineage includes an Israeli defense company that:

1. Was staffed by Israeli intelligence veterans
2. Served the Israeli Defense Forces
3. Was merged into Visual Defence, which is Flock Safety's corporate parent
4. Provides the foundational technology pipeline

Flock Safety is not the exception. Flock Safety is the pattern.

THE SUPREME COURT MENTION

The Supreme Court is considering a case that could require police to get a warrant to use ALPR systems. Flock Safety has been fighting against such regulations, arguing that its systems are simply "crime-fighting tools" and not subject to Fourth Amendment protections.

The Supreme Court is considering warrant requirements for ALPR systems.

If the Supreme Court requires warrants, it would limit Flock Safety's business model—which depends on warrantless mass surveillance. Flock Safety is fighting to keep warrantless surveillance legal.

Flock Safety is not a neutral technology company. It is a political actor fighting to keep warrantless surveillance legal.

THE CAPTURE NETWORK CONNECTION

The Structural Reality of the Connection:

Element	Connection
Corporate Parent	Visual Defence is the result of a merger with Israeli company Emblaze Defense
Israeli Intelligence	Emblaze Defense was staffed by Israeli intelligence veterans, including a Brigadier General from the IDF intelligence corps
Israeli Defense Forces	Visual Defence has contracts with the Israeli Defense Forces

Element	Connection
U.S. Government	Visual Defence has contracts with U.S. Homeland Security
Flock Safety	Operates as an American company but is structurally linked to the Israeli surveillance pipeline
Palantir	Flock's data integrates with Palantir, which has deep ties to Israeli intelligence and Unit 8200

The connection is not direct ownership. It is structural integration. Flock Safety's corporate parent was created through a merger with an Israeli defense company that served the Israeli Defense Forces. This is the same pattern as Axonius, Palantir, and every other node in the capture network.

THE VERDICT

Flock Safety is a node in the same Israeli surveillance capture network as Axonius, Palantir, and Cellebrite. The connection is structural, not organizational. The pipeline is operational. The 110th exile is coming.

The 110th exile is coming. Prison mandatory. No softening. The doors are off.
